Subject: Graphic Packet
To: packet-radio@ucsd.edu

73 all,

     I'm looking for the Graphic Packet Stuff... but i couldn't find it on any
server so if someone got it or know where i can get it, it would be nice to
answer me

                                      Thanx and 73..

Subject: HELP WANTED G8BPQ IP ROUTER
To: packet-radio@ucsd.edu

In the G8BPQ Version 4.06 e package I found the IP Router doc file
and CFG file. Both are skimpy with details. I have loaded it in
a DesqView window but find it opensa and immediately closes after
leaving a command line at the bottom of the video page.

Does anyone out there in netland run the IP Router from G8BPQ? Are
there any special things I should know? Where does the program have to
come in the loading sequence? Any clues will be greatly appreciated!

Carl

Subject: Packet for Windows
To: packet-radio@ucsd.edu

I'd appreciate pointers to controller software that runs under Windows. I
remember hearing about WinPacket. What is the current version, and where is
it located? Or is there something better?

Subject: Rejecting by 4X1RU packet radio BBS.
To: packet-radio@ucsd.edu

Hello packet-loving society

Yes, a bad thing has happened. 4X1RU, sysop of 4X1RU BBS,
maintains an extensive reject list on his FBB-BBS. Now, it
is the right of every sysop ofcourse to put people in a
reject list, but:

1) If I am on such a list (which I actually am), before I'll
   be put on such a list, I would like to become a warning
   of the sysop, why he wants to put me in his reject list.
   Maybe I can avoid it in the future. If I don't listen to
   him, then it's my own fault if I'm rejected.
2) When a sysop puts someone an a reject list, it would be
   wise to review this list once in a while, and people
   which seem to obey more or less to the rules should be
   taken out again.
3) It's not a good idea to distribute your list among other
   sysop's (in my opinion, and 4X1RU actually does this).

As you could have guessed, I'm on the list as well. I am
categorised as sending out non-English language bulletins to
EU or WW. This is *bullshit*. Yes, I sent out a few bulletins
in German, but they were only sent out to EU. The reason that
I do this is because:
1) Not all Germans/Austrians/Swiss speak English fluently
   enough to understand me.
2) In the eastern-Europe there are a lot of countries where
   they speak better german than English.
So, it's not up to the sysop to decide that this is wrong. If
I would sent out frequently bulletins in Dutch to WW, then
it would be his right to reject me.

There are a lot of European users on the list. Many from
Germany/France/UK/Italy/the Netherlands. Because our packet-
system is far from optimised (read: software correctly
configured), it is very well possible that my bulletins
go to destinations, which I didn't want them to go. Should
my messages aimed at @NLDNET also go to other countries
(except Belgium, which is part of NLDNET).

Boy believe me, I don't like this list. I hope this won't
ever happen on Internet/USEnet or whatever-they-are-called-
net (but we have a democratic net :-).
By the way, I am not against maintaining a reject list, but
sysop's should apply it with common sense.

Lastly I have appended the rejet.sys file of 4X1RU. If you're

interested, unpack it, and see if you're in it. Sent out
your anger. Maybe 4X1RU will change his mind :-)
(The list was UNIX-compressed, and then UUEncoded. Apply the
 reverse order to decode it to sensible ASCII)

To: packet-radio@ucsd.edu

To those trying to decode the UUe file. I have compressed it with gzip,
which I thought was unix-compress compatible. Well maybe a wrong parameter
(should have reread the manual though :-( )
Sorry for the inconvenience. Bye.

From: news-mail-gateway@ucsd.edu
Subject: TheNet version X1J
To: packet-radio@ucsd.edu

I've asked about where to get TheNet version X1J, and have been told
that it is presently under beta test. I've looked for it all over the
internet with no luck.

However, I ran across an article written for packet cluster that
indicated it was available and up and running on various packet cluster
nodes.

I managed to obtain it and am now running it on two nodes with no problems
as of yet. It seems to be being passed around hand to hand and under the
table apparently, but the fact is that it is going up all over the country
beta test or not. I guess you might call that one heck of a beta test.

In any case I have placed it on ucsd.edu in hamradio\packet\tcpip\incoming
although I did not give any explanation for it. (sorry brian).

If it does not get killed .. go and get it. What's the saying? Caveat-
Emptor???   I think it applies here, although it is presently working
perfectly.

Mark
